

FOR IMMEDIATE RELEASE

## Designer Power Communication Series Takes Charge of Hospitality Environments

North Carolina – Specialty Lighting, a leading source for lighting solutions, introduces the Designer Power Communication (DPC) series – versatile power units with USB charging. Designers and furniture manufacturers can easily incorporate these trending power units into chairs, tables, or other hospitality applications.

The DPC1 delivers power and flexibility in a small package. With tamper-resistant outlets that meet NEC requirements, it is available with 10 outlet and powered USB combinations and seven colors in either 15A or 20A modules.

The DPC2 brings tamper-resistant outlets (meets NEC requirements), powered USBs, a circuit breaker, and 12 different outlet/USB combinations in 15A or 20A outlet modules.

The DPCL2, NEC-approved tamper-resistant outlets combined with powered USBs creates a sleek, power/distribution communications solution. 15A or 20A modules with a switch/breaker deliver a flexible way to provide convenient power and USB or non-powered telephone, data, or HDMI options.

Page Two

The metal constructed DPC series is a standard order or can be customized in our factory for most project needs.

Specialty Lighting is a market leader dedicated to the art of illumination and power distribution. Since 1975, we have been committed to ongoing research and product development. Our expansive product offering has been carefully crafted to address a wide range of applications ranging from the most basic and simple designs to more elaborate and complex custom designs. Products meet or exceed United States and Canadian safety standards and are UL, CSA or ETL listed. We're ready to assist you with your next project.
