

Power outlets & cords that meet NEMA & IEC standards for hospital & medical environments.

## Safe & Dependable Power Solutions

Medical equipment in healthcare environments must meet strict guidelines including construction of the power receptacles and cords. Hospital grade receptacles and power cords are specially designed and are subjected to additional testing. These include grounding reliability, assembly integrity, strength and durability tests.

The featured DPC series offers a variety of outlet combinations designed especially for hospital environments. Additional options include tamper-resistant outlets, surge suppression, and charging USB.

Our product offering includes hospital grade power cords that meet the rigorous demands of medical environments. Look for the green dot signifying that the product meets hospital grade standards.

As a certified UL, CSA, and ETL manufacturing facility located in the US, our products meet or exceed National Electrical Code (NEC) standards.
